

FIELD NOTEBOOK

Survey of the north ridge — 14 March 1985

Weather closed in before first light. Took the lower traverse instead and reached the col at 09:40, an hour behind the plan.

Rock is sound to about 200 m, then loose to the shoulder. Recommend the eastern approach for any repeat visit.

Instruments read low all morning; suspect the damp.

MEASUREMENTS

Sheet 2 of 2

Station	Bearing	Distance	Notes
A	041	118 m	from cairn
B	093	64 m	scree, unstable
C	150	203 m	to the col

Closure error 0.4 m over the loop. Acceptable.

Signed, R. Ellis
